

FIND ENERGY SAVINGS AT HOME

An energy assessment is like preventative healthcare for your home. A professional can pinpoint ways for you to be more energy-efficient and save money—and catch problems before they become a costlier issue.

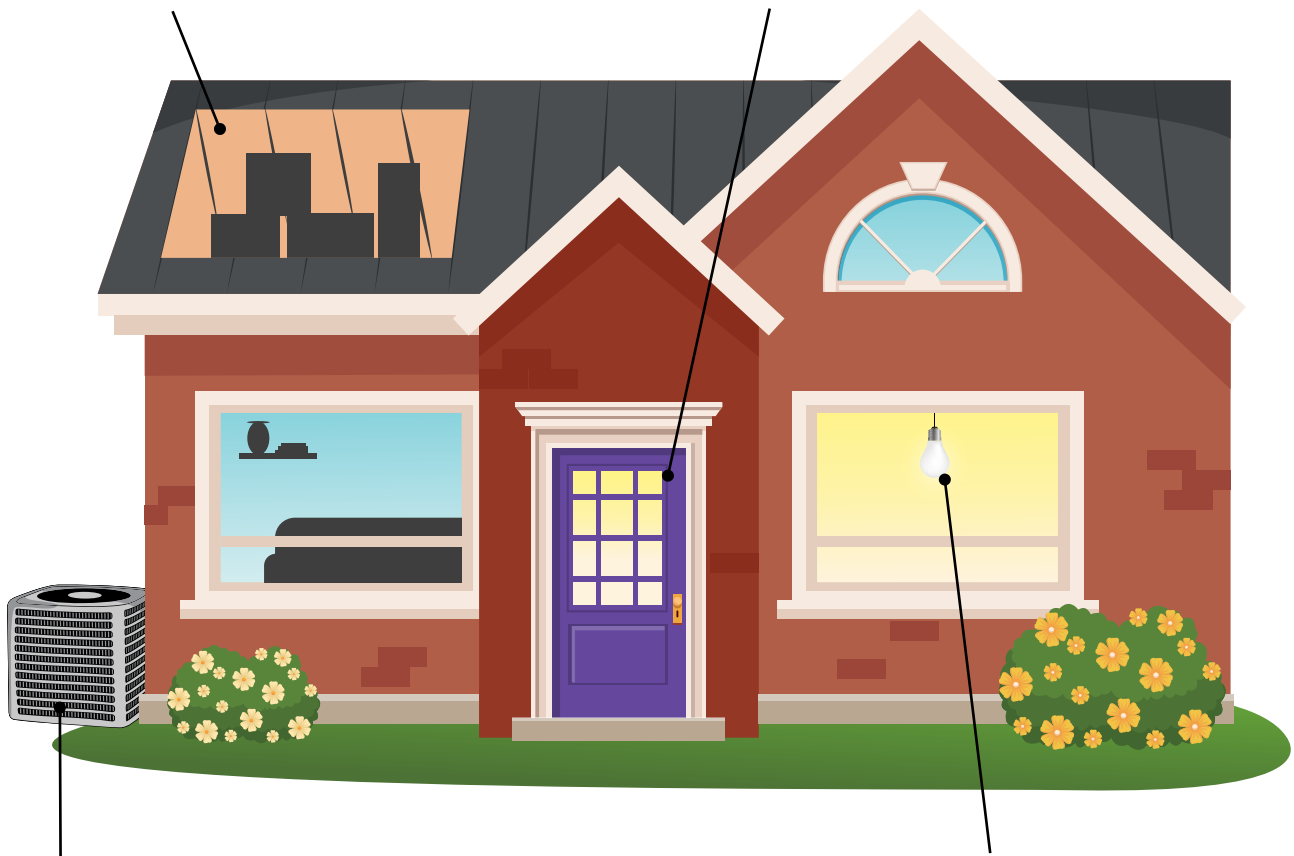

A home energy auditor might check...

Insulation

Ineffective or outdated insulation could cost you in energy when heating or cooling your home.

Air leaks

Doors, windows, and outlets can create air leaks. Sealing can help you spend less energy and money keeping your home's temperature stable.

HVAC system efficiency

Your heating and cooling equipment may be sources of air leaks or may be inefficient, costing you more to use.

Overall energy consumption

By reviewing past utility bills, assessing appliances, and understanding overall energy use, a professional can help you find the best ways to save.
